FULL PROJECT REPORT

Name: Tavishi Garg

Reg No: 25BAI10085

Branch: B. Tech CSE (AI & ML)

Year: 1st Year

Course Code: CSE0001

Course Name: Digital Literacy

Date: 23rd March 2026

📘 Introduction

Digital literacy is an essential skill in today's technology-driven world. This project was assigned as part of the Digital Literacy course to help students understand and apply important digital skills. As a Student Digital Ambassador, the objective was to create awareness about safe and effective use of digital tools, develop a professional online presence, and understand cyber threats.

Through this project, I completed five tasks including creating an infographic, building a digital portfolio, exploring coding platforms, learning email etiquette, and studying cybercrime awareness. These activities helped me gain practical knowledge and improve my understanding of responsible digital behaviour. Overall, this project enhanced my technical skills and prepared me for future academic and professional challenges.

🎨 Task 1

For this task, I created a digital literacy awareness infographic using Canva, which is a widely used online design platform that provides various templates, icons, and customization options. I selected a clean and visually appealing template and modified it according to the required topics. The aim of the infographic was to spread awareness among students about the importance of digital literacy in everyday life.

The infographic includes several important aspects such as the meaning of digital literacy, safe internet practices, useful digital tools for students, professional online presence, and email etiquette. I added key points like using strong passwords, avoiding suspicious links, and maintaining a clean and professional profile on platforms such as LinkedIn and GitHub. I also used icons, colour combinations, and proper spacing to make the content more engaging and easier to understand.

One challenge I faced was fitting all the relevant information into a single slide without making it look overcrowded. However, this helped me improve my ability to present information in a concise and organized manner. Overall, this task enhanced my creativity and helped me understand the importance of visual communication in spreading awareness.

🌐 Task 2

In this task, I built my digital portfolio by creating and updating profiles on LinkedIn, GitHub, and Kaggle. These platforms are essential for students to establish a professional online presence and showcase their skills and achievements. LinkedIn is a professional networking platform where individuals can connect with industry professionals, explore job opportunities, and present their educational background. GitHub is a platform used for managing and sharing projects, especially in programming and development, while Kaggle is widely used for data science and machine learning practice.

On GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I completed my education section by adding my course, institution, and expected graduation year. On Kaggle, I explored datasets and learning resources related to data science. These platforms helped me understand how to present myself professionally in the digital world.

Over the next four years, I plan to regularly update my GitHub with projects, use LinkedIn to build a strong professional network, and practice data science skills on Kaggle. This task made me realize the importance of maintaining a strong digital identity from the beginning of my academic journey.

💻 Task 3

For this task, I explored both coding and collaboration platforms to understand their practical applications in academics. I used HackerRank to practice coding problems and improve my problem-solving skills. I completed beginner-level challenges, which helped me understand basic programming concepts such as input/output operations, loops, and logical thinking. Practicing on HackerRank gave me confidence in writing code and solving problems step by step.

In addition to coding practice, I created a Google Form titled “Digital Literacy Awareness Quiz.” The form included five questions related to digital literacy, safe internet practices, and online behaviour. I used both multiple-choice and short-

answer questions to make the quiz interactive. I also linked the form to a Google Sheet, which automatically collects and organizes responses. This feature is very useful for analysing data efficiently.

These tools will be highly beneficial in my academic journey. HackerRank will help me continuously improve my coding skills, which are essential for my course. Google Forms will be useful for conducting surveys, quizzes, and collecting data for projects. Overall, this task provided hands-on experience with both technical and collaborative tools.

📧 Task 4

In this task, I focused on understanding and applying proper email etiquette and responsible online communication. I drafted two professional emails: one requesting an assignment extension and another expressing interest in a summer internship. While writing these emails, I ensured that they included a clear subject line, proper greeting, well-structured body, and a polite closing. This helped me understand how to communicate effectively in formal situations.

I also created a social media dos and don’ts checklist to highlight responsible online behaviour. The checklist included important points such as maintaining a professional tone, avoiding sharing personal information, and not engaging in cyberbullying. This activity helped me understand the impact of digital communication on one’s personal and professional image.

Poor digital communication can lead to misunderstandings or missed opportunities. For example, sending an email without proper structure or tone may appear unprofessional and may not receive a response. By learning these skills, I now understand the importance of clarity, politeness, and professionalism in online communication. This task improved my confidence in writing formal emails and helped me become more aware of responsible digital behaviour.

🔐 Task 5

In this task, I studied cybercrime awareness with a focus on UPI fraud, which is one of the most common types of online fraud in India. UPI fraud occurs when attackers trick users into sharing sensitive information such as OTPs or approving fraudulent payment requests. Through this task, I learned how easily people can become victims of such scams due to lack of awareness.

While researching, I found it surprising that attackers often use simple techniques like fake phone calls, messages, or QR codes to deceive users. Many people fall for these tricks because the messages appear to be from trusted sources such as banks or payment apps. This made me realize how important it is to stay alert while using digital payment systems.

One important habit I will change is to always verify the authenticity of any request before taking action, especially when it involves financial transactions. I will also avoid sharing personal or banking information with anyone. This task increased my awareness about online threats and the importance of cybersecurity. It helped me understand that being cautious and informed is the best way to stay safe in the digital world.

✅ Conclusion

This project provided me with a comprehensive understanding of digital literacy and its importance in today's technology-driven world. Through the various tasks, I learned how to use digital tools effectively, create a professional online presence, and communicate responsibly in a digital environment. I also gained practical experience in designing visual content, building online profiles, solving coding problems, and creating online forms.

Additionally, learning about cybercrime and online safety made me more aware of potential digital threats and the importance of staying cautious while using the internet. This project not only improved my technical knowledge but also helped me develop essential skills such as critical thinking, creativity, and responsible digital behaviour. Overall, it has prepared me to use technology more confidently and effectively in my academic journey and future career.
